The 2nd IEEE/ACM International Workshop On Network-Aware Big Data Computing (NEAC)

Co-located with CCGrid'20, Melbourne, Australia

Call for Papers

Organizers

Long Cheng, Dublin City University, Ireland
John Murphy, University College Dublin, Ireland
Zhiming Zhao, University of Amsterdam, Netherlands

Program Committee

Aymen Azouz, Oracle, Ireland
Leandro Almeida, FTUB, Brazil
Dick Epema, TU Delft, Netherlands
Yang Hu, National University of Defense Technology, China
Zhuozhao Li, University of Chicago, USA
Cong Liu, Shandong University of Technology, China
Jinwei Liu, Florida A&M University, USA
Liam Murphy, University College Dublin, Ireland
Ying Mao, Fordham University, USA
Radu Prodan, University of Klagenfurt, Austria
Lukas Rupprecht, IBM Research Almaden, USA
Ilias Tachmazidis, University of Huddersfield, UK
Alexandru Uta, Vrije Universiteit Amsterdam, Netherlands
Shen Wang, University College Dublin, Ireland
Ying Wang, Institute of Computing Technology, CAS, China
Lei Yang, South China University of Technology, China
Murat Yilmaz, Dublin City University, Ireland
Dian Zhang, The Insight Centre for Data Analytics, Ireland

Publicity Chair

Madhusanka Liyanage, University College Dublin, Ireland

Publication Chair

Qingzhi Liu, Wageningen University & Research, Netherlands

Web Chair

Qishan Yang, Dublin City University, Ireland
Jose Juan Dominguez Veiga, Dublin City University, Ireland

Important Dates

Submission Deadline: Feb 10th, 2020
Author Notification: Feb 28th, 2020
Camera-Ready Due: Mar 5th, 2020
Workshop Date: May 11th, 2020

About

Network communications is one of the main performance challenges for big data computing in large distributed systems such as datacenters, in terms of both communication time and energy consumption. Significant improvements have been achieved by using the state-of-the-art methods, designed in the research domains of data management (e.g., locality scheduling), data communications (e.g., flow scheduling) and network management (e.g., routing). However, almost all the techniques in their own fields just view each fields as a black box, and the additional performance gains from a co-optimization perspective have not yet been well explored. Moreover, in emerging data networks (e.g., DCNs with programmable switches or IoT networks), part of computation from end hosts can be offloaded into networks. This new paradigm can process data as it flows and have redefined the computation and communication in data processing, and thus how to optimize big data computing within the scheme becomes an interesting question.

The NEAC workshop aims to explore network-aware optimization opportunities for big data computing in distributed systems. It will bring researchers from related fields together to investigate innovative models, algorithms, architectures and systems to minimize data movement time, message traffic and energy consumption for big data computing in various network infrastructures, and consequently deliver significant performance improvements to the large-scale data analytics community.

Topics of Interest

This workshop seeks interesting and innovative contributions and surveys on methods and designs covering all aspects of optimization for data computing, communication, message traffic and energy consumption in different network configurations. This workshop also encourages new initiatives of building bridges between big data computing and network communications. Topics of interest include, but are not limited to:

1. All network-aware optimization techniques for big data computing in distributed environments such as data locality, task, job, flow and routing scheduling in cluster, grid, edge and cloud.
2. All data-aware network designs such as protocols, domain-specific solutions and architectures for wireless networks, software-defined networks, data center networks, peer-to-peer networks, sensor networks, and Internet of Things.
3. All application and network co-design techniques for big data computing such as performance models, algorithms, programming paradigms, architectures and systems.

Submission

Submit your paper (up to 8 pages for long papers and 4 pages for short papers, IEEE format) via the EasyChair paper submission website `https://www.easychair.org/conferences/?conf=neac20`

For further information regarding the NEAC 2020 program, please contact the workshop co-organizer Long Cheng at long.cheng@dcu.ie.
